Preface

This book has an aim to assist the students of foreign language departments in their study of the fundamentals of Modern English Lexicology. The book is based on the course of lectures in English Lexicology and fully meets the requirements of the programme in the subject. It includes the material about the English word and its structure, about the complex nature of the word's meaning, about homonyms, synonyms and antonyms, phraseological units, lexicography and some other aspects of English lexicology.

Each chapter of the book contains some theoretical problems to be discussed, the list of definitions of the main notions to remember, practical tasks for seminars and independent work to be analyzed and a brief list of recommended literature. In appendices students will find supplementary materials intended for gaining additional information about the vocabulary resources of Modern English, stylistic peculiarities of its vocabulary, word-building elements. Students are also given the list of questions for revision and a self-assessment test which will help them to prepare for the exam in the course of English lexicology.

The authors hope that the book will help students to be word-conscious, to be able to guess the meaning of words they come across from the meanings of morphemes, to be able to recognize the origin of this or that lexical unit.

1 General Problems of the Theory of the Word

1.1 Consider your answers to the following.

1. The object of Lexicology.

The theoretical and practical value of English Lexicology.

- 2. Links of Lexicology with other branches of linguistics.
- 3. Vocabulary as a system. The notion of lexical system.
- 4. The approaches to language study.
- 5. The word as a fundamental unit of language.
- 6. Methods of linguistic analysis.

1.2 Remember the following definitions.

Lexicology – is a branch of linguistics which deals with the vocabulary of a language. It is concerned with words, variable word-groups, phraseological units, and with morphemes which make up words.

Vocabulary of a language – is the total sum of its words.

General lexicology – is a part of general linguistics; it is concerned with the study of vocabulary, irrespective of the specific features of any particular language.

Special lexicology – is the lexicology of a particular language (e.g. English, Russian, etc.); devotes its attention to the description of the characteristic peculiarities in the vocabulary of a given language.

Lexical system – is a coherent homogeneous whole constituted by interdependent elements of the same order related in certain specific ways.

Diachronic approach to language study deals with the origin, change and development of the words in the course of time.

Synchronic approach to language study describes the vocabulary as it exists at a given time.

Word – is a sequence of human sounds conveying a certain concept idea or meaning which has gained general acceptance in a social group of people speaking the same language and historically connected.

Word – is a speech unit used for the purposes of human communication, materially representing a group of sounds possessing a meaning, susceptible to grammatical employment and characterized by formal and semantic unity.

Morpheme – the smallest two-faced unit to be found within the word; it is studied on the morphological level of analysis.

1.3 Define the type of lexicological approach to language study.

- 1. Type of lexicology that deals with A. General lexicology the origin, change and development of the words in the course of time.
- 2. Type of lexicology that studies B. Synchronic or descriptive words irrespective of the specific features of lexicology any particular language.
- 3. Type of lexicology that devotes its C. Historical or diachronic attention to the description of words of a lexicology particular language.
- 4. Type of lexicology that is D. Special lexicology concerned with the vocabulary as it exists at a given time.

1.4 Match the definition of the word with the author it belongs to.

1. Word is a speech unit used for the purposes of human communication, materially representing a group of sounds possessing a meaning, susceptible to grammatical employment and characterized by formal and semantic unity.

A) St. Ullman

- 2. Word is a sequence of human sounds conveying a certain concept, idea in meaning which has gained general acceptance in a social group of people speaking the same language and historically connected.
- B) F. Berezin

- 3. Word is meaningful unit which composes meaningful segments of some connected discourse.
- C) G. Antrushina

4. Minimum free form.

- D) L. Bloomfield
- E) A. Smirnitsky

2 General Characteristics of the Modern English Vocabulary

2.1 Consider your answers to the following.

- 1. The volume of the vocabulary and its use. Changeability of the vocabulary. The causes of changeability.
- 2. The basic word stock of the English language. Its relative stability and general use.
- 3. The extension of the English Vocabulary.
- 4. Characteristic features of the Modern English Vocabulary.
- 5. English vocabulary as a system. Different principles of grouping the vocabulary (non semantic, semantic groupings of the vocabulary). Linguistic criteria of distinguishing lexico semantic groups.
 - 6. The theories of Semantic Fields.

2.2 Remember the following definitions.

Literary colloquial words - are informal words that are used in everyday conversational speech both by cultivated and uneducated people of all age groups.

Slang – language of a highly colloquial style, considered as below the level of standard educated speech, and consisting either of new words or of current words employed in some special sense.

Dialects – are regional forms of English.

Learned words – words mainly associated with the printed page.

Archaic words (archaisms) – words current in an earlier time but rare in present usage.

Obsolete words – words no longer in use; out of use for at least a century.

Historisms – are words denoting objects and phenomena which are things of the past and no longer exist.

Neologisms – words which have recently appeared in the language.

Term (**Professional terminology**) – a word or a word-group which is specifically employed by a particular branch of science, technology, trade of the arts to convey a concept, peculiar to this particular activity.

Basic stock – a certain stable layer in the vocabulary, which changes very slowly and which is the basis for the further growth of the vocabulary.

Lexico-grammatical group – is a class of words which have a common lexico-grammatical meaning, a common paradigm, the same substituting elements and possibly a characteristic set of suffixes, rendering the lexico-grammatical meaning.

Semantic fields – closely connected parts of vocabulary, each characterized by a common concept.

- 2.3 The italicized words and word-groups in the following extracts are informal. Write them out in two columns and explain in each case why you consider the word slang/colloquial. Look up any words you do not know in your dictionary.
- 1. The Flower Girl.... *Now you are talking!* I thought you'd *come off it* when you saw a chance of getting back *a bit of* what you *chucked* at me last night. (Confidentially.) You'd *had a drop in*, hadn't you?
- 2. Liza. What call would a woman with that strength in her have to die of influenza? What become of her new straw hat that should have come to me? Somebody *pinched* it; and what I say is, them as pinched it *done her in*.

Mrs. Eynsfordhill. What does doing her in mean?

Higgins (hastily). Oh, that's the new small talk. To do a person in means to kill them.

3. Higgins. I've picked up a girl.

Mrs. Higgins. Does that mean that some girl has picked you up?

Higgins. Not at all. I don't mean a love affair. Mrs. Higgins. What a pity!

(From *Pygmalion* by B. Shaw)

4. Jack (*urgently*): Mrs. Palmer, if I ask you a straight question, will you please give me a straight answer?

Muriel: All right. Fire away.

Jack: Is your mother divorced?

Muriel: Divorced? Mum? Of course not.

Jack (quietly): Thank you. That was what I had already gathered.

Muriel: *Mind you*, she's often thought of divorcing *Dad*, but somehow never *got round to* doing it. Not that she's *got a good word to say for him, mind you*. She says he was the laziest, *pottiest*, most selfish *chap* she's ever *come across* in all her life. "He'll *come to a sticky end*," she used to say to me, when I was a little girl. "You *mark my words*, Mu," she used to say, "if your Dad doesn't end his days in jail my name's not Flossie Gosport."

(From *Harlequinade* by T. Rattigan)

5. My wife has been *kiddin'* me about my friends ever since we was married. She says that ... they ain't nobody in the world got a *rummier bunch* of friends than me. I'll admit that the most of them ain't, well, what you might call *hot*; they're different somehow than when I first *hung around* with them. They seem to be lost without a brass rail to rest their *dogs* on. But of course they are old friends and I can't *give them the air*.

(From *Short Stories* by R. Lardner)

2.4 Read the following jokes. Write out the informal words and word-groups and say whether they are colloquial, slang or dialect.

1. A Yankee passenger in an English train was beguiling his fellow passengers with tall stories¹ and remarked: "We can start with a twenty-story apartment house this month, and have if finished by next."

This was too much for the burly Yorksbireman, who sat next to him. "Man, that's nowt", he said. "I've seen 'em in Yorkshire when I've been going to work just laying the foundation stone and when I've been coming home at neet they've been putting the folk out for back rent."

2. A driver and his family had gathered bluebells, primrose roots, budding twigs and so on from a country lane. Just before they piled into the car to move off Father approached a farmer who was standing nearby and asked: "Can we take this road to

¹ Eliza means the money that Higgins gave her on their previous meeting.

Sheffield?" The farmer eyed the car and its contents sourly, then: "Aye, you mun as well, you've takken nigh everything else around here."

¹ tall stories — stories that are hard to believe.

- 2.5 The italicized words and word-groups in the following extracts belong to formal style. Describe the stylistic peculiarities of each extract in general and say whether the italicized represents learned words, terms or archaisms. Look up unfamiliar words in the dictionary.
 - 1. "Sir,

in re¹ Miss Ernestina Freeman

We are *instructed* by Mr. Ernest Freeman, father of the *above mentioned* Miss Ernestina Freeman, to *request* you to *attend* at these *chambers* at 3 o'clock this coming Friday. Your failure to attend will be regarded as an acknowledgement of our client's right *to proceed.*"

- ¹ Usually in modern correspondence you will find the form *re* [ri:] without the *in*. (From The French Lieutenant's Woman by J. Fowles)
- 2. "I have, with *esteemed* advice ..." Mr. Aubrey bowed briefly towards the sergeant, ..."... prepared *an admission of guilt. I* should *instruct* you that Mr. Freeman's decision not to proceed immediately is most strictly *contingent* upon your client's signing, on this occasion and in our presence, and witnessed *by all present, this* document."

(Ibid.)

3. "... I want you to keep an eye on that *air-speed indicator*. Remember that an airplane stays in the air because of its *forward speed*. If you let the speed drop too low, it stalls — and falls out of the air. Any time *the ASI shows a reading* near 120, you tell George instantly. Is that clear?" "Yes, Captain. I understand." "Back to you, George... I want you to unlock *the autopilot* — it's clearly marked on *the control column* — and take the airplane yourself. ... George, you watch the *artificial horizon* ... *Climb and descent indicator* should stay at zero."

(From Runway Zero-Eight by A. Hailey, J. Castle)

4. Mr. Claud Gurney's production of *The Taming of the Shrew* shows a violent *ingenuity*. He has learnt much from Mr. Cochran; there is also a touch of Hammersmith in his *ebullient* days. *The speed, the light, the noise, the deployment* of expensively coloured figures ...amuse the senses and sometimes *divert* the mind from the unfunny brutality of the play, which *evokes* not one natural smile.

(From a theatrical review)

2. 6 From the words given below, pick out the archaic words and comment on their meaning. See appendix C.

Do, dost, does, you, thee, ye, thou, horse, though, albeit, also, eke, spring, vernal, said, quoth, told, maiden, girl, haply, perhaps, ere, before.

2.7 Substitute modern forms and words for the following.

Hath, dost, thee, didst, wight, ye, whilom, sooth, yon, rhymeth, sate.

2.8 Give modern English equivalents of the following words. Translate them into Russian. See appendix C.

Bade, spouse, dire, aught, quoth, kine, swain, courser, ire, charger, thy, thine, troth, hath, albeit.

2.9 Study the list of neologisms (Appendix D). Comment on their formation. State to what sphere of human activity they belong.

3 Etymological Characteristics of the Modern English Vocabulary

3.1 Consider your answers to the following.

- 1. The notion of etymology. The etymological background of the English vocabulary.
- 2. Words of native origin, words of Indo–European origin and words of Common Germanic origin. The main features of genuine English words.
- 3. Loan–words (borrowed words) in English. Sources and ways of borrowing into English.
 - 4. Assimilation of loan–words. Types of assimilation. Degrees of assimilation.
 - 5. Interrelation between native and borrowed elements in English.
 - 6. Etymological doublets of different origin.
 - 7. International words. Translation—loans.

3.2 Remember the following definitions.

Etymology – is a science of the origin and history of words.

Etymology of words – origin of words.

Native words – are those that belong to the original English stock. They are words of Anglo-Saxon origin brought to the British Isles from the continent in the 5th century by the Germanic Tribes – the Angles, the Saxons and the Jutes.

Borrowed words (loan words) – words taken from other languages and modified in phonemic shape, spelling, paradigm or meaning according to the standards of the English language.

Source of borrowing – is the language from which this or that particular word was taken into English.

Origin of the word – is the language to which the word may be traced.

Assimilation of borrowings - is partial or total adaptation of loan-words to the peculiarities of phonetic, graphical, morphological standards of the receiving language and its semantic system.

Completely assimilated words – are words which undergo grammatical, phonetic and lexical assimilation.

Partially assimilated words – are words which undergo assimilation in some respects but remain unassimilated in others.

Unassimilated words (barbarisms) – are not assimilated in any respect.

Etymological doublets – are two or more words of the same language which were derived by different routes from the same basic word. They differ to a certain degree in form, meaning and current use.

Translation–loans – borrowings of special kind which are not taken into the vocabulary of another language more or less in the same phonemic shape in which they have been functioning in their own language, but undergo the process of translation. They are compound words in which each stem is translated separately.

International words – words, borrowed from one language into several others simultaneously or at short intervals one after another.

3.3 Subdivide all the following words of native origin into: a) Indo-European,b) Germanic, c) English proper.

Daughter, woman, room, land, cow, moon, sea, red, spring, three, I, lady, always, goose, bear, fox, lord, tree, nose, birch, grey, old, glad, daisy, heart, hand, night, to eat, to see, to make.

3.4 Read the following jokes. Explain the etymology of the italicized words. If necessary consult a dictionary.

1. He dropped around to the *girl's house* and as he ran up the steps he was confronted by her *little brother*.

"Hi, Billy."

"Hi," said the brat.

"Is your *sister* expecting me?"

"Yeah."

"How do you know that?"

"She's gone out."

2. A *man* was at a theatre. He was sitting behind *two women* whose continuous chatter became more than he could bear. Leaning forward, he tapped *one* of them on the *shoulder*.

"Pardon me, madam," he said, "but I can't hear."

"You are not supposed to - this is a private conversation," she hit back.

3. Sonny: *Father*, what *do* they *make* asphalt roads of?

Father: That makes a *thousand* questions you've asked today. Do give me a *little* peace. What do you *think* would happen if I had asked my father so *many* questions?

Sonny: You might have learnt how to answer some of mine.

3.5 Identify the period of the following Latin borrowings; point out the structural and semantic peculiarities of the words from each period.

Wall, cheese, intelligent, candle, major, moderate, priest, school, street, cherry, music, phenomenon, nun, kitchen, plum, pear, pepper, datum, cup, status, wine, philosophy, method.

3.6 In the sentences given below find the examples of Scandinavian borrowings. How can the Scandinavian borrowings be identified?

He went on to say that he was sorry to hear that I had been ill. 2. She was wearing a long blue skirt and a white blouse. 3. Two eyes — eyes like winter windows, glared at him

with ruthless impersonality. 4. The sun was high, the sky unclouded, the air warm with a dry fresh breeze. 5. If Eastin were right, Wainwright reasoned, the presence of the husband could tie in with Wainwright's own theory of an outside accomplice. 6. It's not such a bad thing to be unsure sometimes. It takes us away from rigid thinking.

3.7 Read the following extract. Which of the italicized borrowings came from Latin and which from French? See appendix J.

Connoisseurs of the song will be familiar with the name of Anna Quentin, distinguished blues singer and versatile vocalist. Miss Quentin's admirers, who have been regretting her recent retirement from the limelight, will hear with mixed feelings the report that she is bound to Hollywood. Miss Quentin, leaving for a short stay in Paris, refused either to confirm or to deny a rumour that she had signed a long-term contract for work in America.

3.8 Explain the etymology of the following words. See appendix J.

Sputnik, kindergarten, opera, piano, potato, tomato, droshky, czar, violin, coffee, cocoa, colonel, alarm, cargo, blitzkrieg, steppe, komsomol, banana, balalaika.

3.9 Classify the following borrowings according to the sphere of human activity they represent. What type of borrowings are these?

Television, progress, football, grapefruit, drama, philosophy, rugby, sputnik, tragedy, coca-cola, biology, medicine, atom, primadonna, ballet, cricket, hockey, chocolate, communism, democracy.

3.10 Group the following words according to their origin.

Caftan, lilac, canoe, operetta, machine, vanilla, waltz, skipper, guerilla, verst, algebra, caravan, jungle, law, mule, chocolate, telephone, dollar, khaki, artel, wigwam, mazurka, pagoda, cannibal, kangaroo, taboo, chimpanzee, maize, gorilla, tabacco, verandah, beryl, chauffeur, beauty, umbrella, squaw, devil, school, nun, anchor.

3.11 Write the words out in three columns: a) fully assimilated words; b) partially assimilated words; c) unassimilated words.

Pen, hors d'oeuvre, ballet, beet, butter, skin, take, cup, police, distance, monk, garage, phenomenon, wine, large, justice, lesson, criterion, nice, coup d'etat, sequence, gay, port, river, loose, autumn, low, uncle, law, convenient, lunar, experiment, skirt, bishop, regime, eau-de-Cologne.

3.12 a) State the origin of the following doublets (Appendix E). b) Comment on the different formation of the doublets and on the difference in meaning, if any.

- 1. Abbreviate —abridge; cavalry chivalry; captain chieftain; cart chart; fragile-frail.
- 2. Artist artiste; corps corpse; liquor liqueur; rout route; suit suite; salon saloon, travel travail.
 - 3. Shade shadow; of –off; whit- wight; dike ditch.
- 4. Balm balsam; emerald smaragdus; hospital hostel, hotel; gaol jail; major mayor; pauper poor; senior sir; canal channel; legal loyal.
 - 5. Skirt shirt; screw shrew; screech shriek; nay –no.
 - 6. Ward guard; wage gage.

4 The Structure of English Words and Word-Building in English

4.1 Consider your answers to the following.

- 1. Morphological structure of words in Modern English. Structural and semantic classification of morphemes. Free and bound morphemes. Words and morphemes. Roots and affixes. Derivational and functional affixes, semi affixes.
- 2. Different types of words: root-words, derivatives, compounds proper and derived compounds.
- 3. Principles of morphological analysis of the structure of words.
- 4. Various ways of word-building in English:
- 1) Affixation. Classification of English affixes. Polysemy, synonymy and homonymy of English affixes. Productive affixes. Historical modification of affixes and changeability of their productivity.
- 2) Conversion or non-affixed word-building as one of the most productive ways of making new words in Modern English. Different conceptions of the problem of conversion. Types of conversion. The problem of "stone wall".
- 3) Composition in English and its specific features. The problem of distinguishing compounds from word combinations in English. Different types of compounds in Modern English:
- compounds formed by means of stem-junction (of non-derived stems, derived stems, abbreviated stems);
 - derived compounds;
 - compound words formed by means of stem-junction with a linking element;
 - compound words formed by way of isolating syntagmas;
- specific features of compounds belonging to different parts of speech. Historical changes in the structure of compound words.
- 4) Shortening of words and word combinations as a productive way of building words in Modern English. Various types of abbreviated words and their functional use.

5) Other ways of word-building: gradation, stress – shifting, blending, back formation and sound-imitation.

4.2 Remember the following definitions.

Word-building (word formation) – is the process of forming words by combining root and affixation morphemes according to certain patterns specific for the language.

Free morphemes – morphemes which can stand alone without changing the meaning; they coincide with the stem of a word form.

Bound morphemes – are morphemes which occur only as constituent parts of the word and can't be used independently.

Semi-bound morphemes – morphemes which can function both as affixes and free morphemes.

Root morpheme - a semantic nucleus of the word; it has an individual lexical meaning and it is the common elements of the words within a word family.

Non-root morphemes – are inflexion morphemes, carrying only grammatical meaning and affixation morphemes.

Prefix – is a derivational morpheme standing before the root and modifying the meaning.

Suffix – is a derivational morpheme following the stem and forming a new derivative in a different part of speech or a different word-class.

Infix – is an affix placed within a word.

Functional affixes – serve to convey grammatical meaning; they build different forms of one and the same word and they are responsible for a paradigm.

Derivational affixes – serve to supply the stem with components of lexical and lexico-grammatical meaning; they form different words.

Root-words – elements of the English vocabulary which constitute the nucleus of a word family; they are the basis for forming new words.

Derived words – are words which have word-building affixes.

Compound words – are words consisting of two or more stems which occur in the language as free forms.

Derived compounds - are compounds having derivative affixes.

Word formation - is the process of forming words by combining root and affixation morphemes according to certain patterns specific for the language.

Word-derivation (affixation) – is the formation of words by adding derivational affixes to different types of bases.

Conversion – is the process of forming a new word in a different part of speech and with a different distribution characteristic, but without adding any derivative element so that the basic form of the original and the basic form of the derived words are homonymous.

Composition – is a way of word-building when new words are formed by joining two or more stems to form one word.

Shortening (contraction, clipping, curtailment) – is clipping of words and phrases to create short words convenient for oral speech.

Blends – formations that combine two words and include the letters or sounds they have in common as a connecting element.

Sound interchange – is an opposition in which words or word forms are differentiated due to an alternation in the phonemic composition of the root.

Sound imitation (onomatopoeia, echoism) – is the naming of an action or thing by a more or less exact reproduction of a sound associated with it.

Back-formation (**reversion**) – is the derivation of new words by subtracting a real or supposed affix from existing words through misinterpretation of their structure.

4.3 Explain the etymology and productivity of the affixes given below (See appendix D). Say what parts of speech can be formed with their help:

-ness, -ous, -ly, -y, -dom, -ish, -tion, -ed, -en, -ess, -or, -er, -hood, -less, -ate, -ing, -al, -ful, -un, -re, -im (in), -dis, -over, -ab.

4.4 Insert the following words with French affixes into the table.

Arrogance, appointment, courage, enable, endear, intelligence, endurance, passage, hindrance, development, tigress, curious, joyous, enfold, serious, dangerous, marriage, village, enact, actress, adventuress, consequence, enslave, experiment, patience, lioness.

4.5 Separate the following suffixes according to the part-of-speech classification into a) noun-forming suffixes, b) adjective-forming suffixes, c) verb-forming suffixes, d) adverb-forming suffixes, e) numeral-forming suffixes:

5 Semantics

5.1 Consider your answers to the following.

- 1. The word and its meaning.
- a) The problem of meaning. Semasiology. Two trends in modern semasiology.
- b) The lexical and the grammatical meaning of the word.
- c) Types of lexical meaning and their classification.
- d) The meaning of a word and its usage.
- 2. Semantic structure of a word:
- a) polysemy in English and its cause.
- b) the semantic structure of a polysemantic word and its correlation with the lexicosemantic system of the language.
 - 3. Changes in the semantic structure:
- a) the development and change of the semantic structure of a word as a source of a qualitative and quantitative growth of the vocabulary. Social, historic and linguistic factors that call forth the changes in the semantic structure of the word.
 - b) the main semantic processes of the development and change of meaning.

5.2 Remember the following definitions.

Semantics – is the area of lexicology specializing in the semantic studies of the word.

Semasiology – is the branch of lexicology which studies the semantic structure of words and changes in the semantic structure.

Relative (functional) trend in semasiology – treats the language as a semiotic system. The meaning of a linguistic unit is studied through its relation to other linguistic unit.

Denotational (referential) trend - considers a word as a unit possessing its own meaning.

Grammatical meaning - is the meaning proper to sets of word-forms common to all words of a certain class.

Lexical meaning - is the meaning proper to the given linguistic unit in all its forms and distributions.

Denotational meaning – is the realisation of notion; the component of the lexical meaning, which makes communication possible.

Connotational meaning – is the emotive charge and the stylistic value of the word.

Polysemy – the ability of words to have more than one meaning.

Monosemantic words - words having only one meaning.

Polysemantic words - words having more than one meaning.

Metonymy (contiguity of meanings) - is the semantic process of associating two referents one of which makes part of the other or is closely connected with it.

Metaphor (similarity of meanings) – is a semantic process of associating two referents, one of which in some way resembles the other.

Hyperbole – is an exaggerated statement.

Litotes (understatement) – is expressing the affirmative by the negative of its contrary.

Irony – the expression of meaning by words of opposite sense (very often for the purpose of ridicule).

Euphemisms – substitutes used instead of words considered indecent, indelicate, rude or impolite.

5.3 Define the meanings of the words in the following sentences. Say how the meanings of the same word are associated one with another.

7 Synonyms and Antonyms in Modern English

7.1 Consider your answers to the following.

- 1. A definition of synonyms. Criteria of synonymy.
- 2. The sources of synonyms in English.
- 3. The problem of classification of synonyms:
- a) the main groups of synonyms in English: ideographic, stylistic and absolute.
- b) the arbitrary character of this division.
- 4. The idea of the synonymic dominant in a group of synonyms.
- 5. Different methods of distinction between the synonyms (componential analysis, analysis through lexical collocability and grammatical valency).
 - 6. Euphemisms as a specific type of synonyms.
 - 7. A definition of antonyms. Types of words correlated as antonyms.
 - 8. Classification of antonyms.
- 9. Interrelations between synonyms and antonyms. Analogy in their use and development.

7.2 Remember the following definitions.

Synonyms – two or more words of the same language, belonging to the same part of speech and possessing one or more identical or nearly identical denotational meanings, interchangeable, at least in some contexts without any considerable alteration in denotational meaning, but differing in morphemic composition, phonemic shape, shades of meaning, connotations, style, valency and idiomatic use.

Ideographic synonyms –words which differ in denotational component; they are also called semantic synonyms as they denote different shades of meaning.

Stylistic synonyms – are words which have the same denotational component but differ in stylistic colouring and in connotational component.

Total (absolute) synonyms - are words of exactly the same meaning; they can replace each other in any given context.

Synonymic dominant – a word in a group of synonyms with the most general meaning. It belongs to the neutral style and can substitute any word in the synonymic group.

Euphemisms – words used to replace some unpleasant or offensive words.

Antonyms – two or more words of the same language, belonging to the same part of speech, identical in style, nearly identical in distribution, associated and used together so that their denotational meanings render contrary or contradictory notions or meanings.

7.3 The sentences given below contain synonyms. Write them out in groups and explain the difference where the words are familiar.

9 Lexical Valency and Collocability in Modern English

9.1 Consider your answers to the following.

- 1. Grammatical or syntactical and lexical valency and collocobility.
- 2. Norms of lexical valency and collocability.
- 3. Word-groups in English.
- 4. Stable word-combinations of non-phraseological character and their classification.

9.2 Remember the following definitions.

Grammatical or syntactical valency –is the possibility of syntactical connection of a word with other words.

Syntactical collocability – is the realization of the grammatical valency in speech.

Lexical valency – is the possibility of lexico-semantic connections of a word with other words.

Lexical collocability – is the realization in speech of the potential connections of a word with other words.

Distribution – is the sum total of all different positions of a word as regards all other words; words have different lexical meanings in different distributional patterns.

Distributional pattern - is a minimal context to form a word-group.

9.1. State which of the italicized word-combinations are phraseological units. Name the factors which ensure stability of phraseological units in each case.

- 1. Where do you think you *lost your purse*?
- 2. When losing the game one shouldn't lose one's temper.
- 3. Have a look at the reverse side of the coat.
- 4. *The reverse side of the medal* is that we'll have to do it ourselves.
- 5. *Keep the butter* in the refrigerator.
- 6. Keep an eye on the child.
- 7. He threw some cold water on his face to wake up.
- 8. I didn't expect that he would throw cold water upon our project.
- 9. The tourists *left the beaten track* and saw a lot of interesting places.
- 10. The author *leaves the beaten track* and offers a new treatment of the subject.
- 11. I don't want to have a busman's holiday.
- 12. She looks as if butter wouldn't melt in her mouth.

9.2 Give Russian equivalents of the following word-combinations of nonphraseological character and phraseological units. Explain the difference in their meaning.

Blue book; black ball; blue bottle; hot head; hot house; dancing master; flying man; blue stocking; shooting party; skiing instructor.

9.3 Guess the meaning of the following phraseological units. State the degree of motivation. If necessary, use your dictionary.

To risk a sprat to catch a whale; a grain of wheat in a bushel of shaft; to measure another's corn by one's own bushel; to set the tortoise to catch the hare; to sift out ashes from the cinders; to swap horses while crossing the stream.

9.4 Analyse the following word-groups semantically and structurally.

To fish in troubled waters; to cause pain; to take effect; to have one's tongue in one's cheek; to talk nineteen to the dozen; to guild the pill; a white lie; the Mediterranean Sea; to take revenge; to yield results; a strong box; a blank wall; to turn over a new leaf; to strike while the iron is hot; a naked room; to get a dose of one's own medicine; to go to the wall; to pay through the nose; to talk through one's hat; to have a bee in one's bonnet; a bay horse; neat whisky; a blank cartridge; Dutch courage; to have snakes in one's boots.

9.5 State which of the italicized word-combinations are phraseological units. Translate them using a dictionary.

1. He *looked round* but saw nothing suspicious. 2. I'll *show you round*, I know the city. 3. Who can *bear out* your words? 4. He heard the noise and *rushed out*. 5. *Step aside*. 6. It is late. 11 Lexicography

11.1 Consider your answers to the following.

- 1. Aims and tasks of compiling dictionaries.
- 2. Historical development of British and American lexicography.
- 3. Encyclopedia and linguistic dictionaries.
- 4. The selection and arrangement of the material in a linguistic dictionary. A word article.
- 5. Types of dictionaries: general and special dictionaries (explanatory, etymological, phraseological, synonymical, ideographic, teaching, dialectal, dictionaries of slang, etc.)
 - 6. The most important unilingual English dictionaries. Bilingual dictionaries.

11.2 Remember the following definitions.

Lexicography – is the theory and practice of compiling dictionaries.

Linguistic dictionaries – are word-books, their subject matter is lexical units and their linguistic properties such as pronunciation, meaning, usage.

Encyclopedic dictionaries (encyclopedias) - are thing-books, which give information about the extra-linguistic world; they deal with concepts (objects and phenomena) and their relations to other objects and phenomena.

Explanatory (unilingual) dictionaries – are dictionaries in which the words are defined in the same language.

Translation (bilingual) dictionaries – are dictionaries in which the words are explained in another language.

11.3 Read the following extract. Be ready to speak on the history and main problems of lexicography.

1. The theory and practice of compiling dictionaries is called lexicography. Lexicography is closely connected with lexicology, as they both deal with the same problems – the form, meaning, usage and origin of vocabulary units. On the one hand, the material collected in dictionaries is widely used by linguists in their research. On the other hand, the principles of compiling dictionaries are based on linguistic fundamentals, and the selection and arrangement of the material reflects the current knowledge and findings of linguists in various fields of language study.

The main problems of lexicography are as follows:

- 1) In the first place it is the selection of words for inclusion. What words should be reflected in the dictionary? Should obsolete and archaic words, technical terms, dialectisms... be included into a dictionary? It depends on the type of dictionary, the aim the compiler pursues. So, diachronic and synchronic dictionaries differ in their approach to the problem. The spoken and written language also differs in its presentation in dictionaries.
- 2) In the second place, different dictionaries arrange their entries differently. Most dictionaries arrange their entries in a single alphabetical listing. In others the words are

arranged in nests based on different principles (synonymic sets in synonymic dictionaries, constant elements of phrases in phraseological dictionaries). An alphabetical index is usually supplied for more convenient handling of such dictionaries.

- 3) Then comes the problem of the word-meaning and arranging them in the way that must be useful and helpful for those using the dictionary. The number of meaning of a polysemantic word and their choice depends on the aim of the compiler and type of dictionary. Diachronic dictionaries give more meanings than synchronic dictionaries of current language.
- 4) Meanings of words are also defined in different ways: 1) by general explanation; 2) paraphrases; 3) with the help of synonyms; 4) by means of cross-references.
- 5) In a translating dictionary it is sometimes difficult to choose an adequate equivalent or give a precise translation of this or that word; give not only profound information about the meanings of a word and about its usage, but also reflect emotional, stylistic colouring of the word and its usage.
- 2. The need of a dictionary was felt very early in the history of the cultural growth of many civilized peoples.

The history of dictionary-making for the English language comes as far back as the old English period where we can find glosses of religious books with interlinear translation from Latin.

Regular bilingual English-Latin dictionaries existed in the 15th century. Later on English-French and English-German dictionaries appeared because there were trade relations between these countries.

The first unilingual English dictionary explaining difficult words, occurring in books, by English equivalents appeared in 1604. The author of this dictionary was Robert Cawdry, a schoolmaster.

In 1721 an English writer and scientist Nathan Baily published the first etymological dictionary. This dictionary explained the origin of English words and gave their pronunciation.

In 1775 an English scientist and writer of some books Samuel Johnson published a famous explanatory dictionary of the English language. This dictionary made an epoch in

the history of English lexicography. Every word in this dictionary was illustrated with examples taken from English literature. The dictionary was a great success. It was republished many times both in Britain and in America and it influenced the development of British and American lexicography. Johnson's influence on the English language, on its style was of great importance. His dictionary made it possible to preserve English spelling conservative as we have it now.

The aim of the explanatory dictionaries was to normalize the vocabulary, to point out the words that should be used and the words that should not be used.

In 1858 one of members of the English Philological society doctor Trench raised the question of compiling such a dictionary which would include all the words existing in the English language irrespective of their style.

The first volume of the dictionary was published in 1884, the last in 1918, i.e. in 70 years after the society adopted the decision to compile the dictionary. This dictionary is called "A New English Dictionary" (NED). Neither Dr. Trench, nor the editor-in-chief James Murray saw the conclusion of the work. About one thousand people took part in collecting the material for the dictionary, which had 12 volumes. In 1933 the dictionary was republished under the title "The Oxford English Dictionary". The new edition consisted of 13 volumes. There are also short editions of this dictionary: "The Shorter Oxford Dictionary" (in which there are less examples (1956) – 2538 pages (now), "The Concise Oxford Dictionary" was first published in 1911. It includes only modern words and no examples.

The Oxford English Dictionary is the source of scientific material for linguists working on British lexicology.

A little bit later than the English lexicography the American lexicography began to develop. It is a strange coincidence but the name of the first American dictionary writer was also Samuel Johnson. The dictionary was not large and was specially made for schools. It was published in 1798.

But the most famous American dictionaries were those compiled by Noah Webster, who was an active statesman and public man (wrote many books on political, ethical, linguistic problems).

His first dictionary was published in 1806. Webster tried to reform the English spelling, to simplify it, though this reform was adopted only partly. In 1898 Webster published a two-volume dictionary containing 70 000 word-articles. The most valuable feature of the dictionary is the precision in defining different meanings of words. The dictionary was republished many times. In its edition (1958) there are about 600 000 word-articles. There are reference books in it: the geography reference book has 13 000 geographical names, the biography reference book has 36000 names. In the introductory part of the dictionary there are some data about English pronounciation, transcription, word-building, spelling and so on.

Other types of dictionaries appeared in England too. A pronouncing dictionary was first published in 1780 by Thomas Sheridan. Then John Walker, an actor, published his critical pronouncing dictionary in 1791. His pronounciation was adopted later in other pronouncing dictionaries.

The history of English lexicography is very rich. In 1873 W.W. Skeat founded the English Dialect Society. A large group of scientific workers (more than a thousand people) went on expeditions to the remotest parts of Great Britain and collected a lot of examples from different dialects spoken in Wales, England, Ireland and Scotland. A six-volume dialect dictionary was compiled and published by Joseph Wright in 1905. And Walter Skeat published a famous etymological dictionary in 1910. There are more than 80 dictionaries of English synonyms. One of the most famous is "The Dictionary of English Synonyms and Synonymous Expressions" first published in 1938 by Soule.

3. There are many different types of English dictionaries. First of all they are divided into two groups - encyclopedic and linguistic. They differ in the choice of items included and in the sort of information given about them. Linguistic dictionaries are wordbooks, their subject matter is lexical units and their linguistic properties such as pronunciation, meaning, usage. The encyclopedic dictionaries, (encyclopedias) are thingbooks, which give information about the extra-linguistic world, they deal with concepts (objects and phenomena) and their relations to other objects and phenomena.

Though some of the items included in encyclopedic and linguistic dictionaries coincide, information presented in them is different. Ex.: influenza. In a linguistic

dictionary the word article presents pronunciation, grammar characteristics, synonyms... In an encyclopedia the entry includes the causes, symptoms, characteristics of this disease and various treatments and remedies for it.

The most famous encyclopedias in English are "The Encyclopedia Britannica" (in 24 volumes) and "The encyclopedia of Americana" (in 30 volumes). There are also numerous reference books, confined to definite fields of knowledge.

4. Lexicology is closely connected with linguistic dictionaries which are a source of scientific material for linguists. The selection of the material in a linguistic dictionary depends on its type and the aims the compilers pursue, on the size of the dictionary, the prospective use and some other considerations. Explanatory and translation dictionaries usually include words and phraseological units, some of them also affixes. Pronouncing, etymological dictionaries deal only with words. The order of arrangement of the entries (word-articles) to be included is different in different types of dictionaries. Usually the entries are given in a single alphabetical listing, but it some dictionaries the lexical units are arranged in nests based on this or that principle (a synonymic dominant in a synonymic dictionary; a constant element of phrases in phraseological dictionaries, the root of a word in a word-family, etc.) A word-article in different types of dictionaries includes different kind of information about the linguistic characteristics of the word. The etymological dictionary gives the origin of a word, the source of borrowing and main stages of the development of some form and meaning, points out some roots characteristic of Indo-European languages, etc. The pronouncing dictionary gives information on pronunciation (all its possible variants) and no any interpretation of the meaning.

The word-article of "The Oxford English Dictionary" begins with stating to what part of the speech the word belongs, then pronunciation is given in all its variants. If a word is a term or belongs to some dialect, or it is archaic, special marks are made. Then the history of the word is given: the development of its sound form and its etymology. Then the meanings of the word are given - first primary ones, then secondary ones. Every meaning is illustrated by a lot of examples given in etymological order. The last example is the late one. In general there are about 2 million examples in the dictionary. The

dictionary also gives word combinations characteristic of the word. Antonyms and synonyms are also given in the word article.

5. Dictionaries in which the words are defined in the same language are called explanatory or unilingual, but dictionaries in which the words are explained in another language are called translation dictionaries or bilingual. Then there are multilingual or polyglot dictionaries in which words (usually synonyms, terms) are compared in many languages.

There is one more subdivision of dictionaries into general and special. To general dictionaries belong different explanatory dictionaries (both unilingual and bilingual), then etymological, frequency, pronouncing, rhyming and thesaurus type of dictionaries (ideographical). The aim of special dictionaries is to cover a certain part of the vocabulary. Those are dictionaries of scientific terms (medical, technical, biological, botanical, etc.), dictionaries of abbreviations, antonyms, synonyms, toponyms, borrowings, neologisms, proverbs and sayings, phraseological dictionaries and so on. Dictionaries of American English, dialect and slang dictionaries also refer to the type of special dictionaries. They may be unilingual or bilingual as well.

6. English lexicography is probably the richest in the world. A great variety and number of dictionaries are published as the demand for them is great. Correct pronunciation and spelling are of great social importance, as they are necessary for efficient communication. A bilingual dictionary is useful to those who study a foreign language, to specialists reading a foreign literature, to translators, travelers, linguists and so on.

The most important unilingual dictionaries of the English language are "The Oxford English Dictionary", A.S. Hornby, E.V. Gatenly, H. Wakefield "She Advanced Learner's Dictionary of Current English" (1948). There is also a newly published "Oxford Advanced Learner's Dictionary of Current English" by A. S. Hornby with A.F. Cowie, 1982 - special edition for the USSR. Then we must mention also such important dictionaries as E.L. Thorndike and I. Lorge "The Teacher's Word-book of 30 000 words"; "Roget's Thesaurus of English Words and Phrases" (first published in 1882, latest abridged edition is issued in 1962). In our country we have some reliable bilingual dictionaries such as English-

Russian dictionaries by V.K. Muller, by V.D. Arakin, O.S. Achmanova, A.I. Smirnitsky. The most representative is the New English-Russian Dictionary edited by prof. I.R. Galperin. There is a very good bilingual dictionary of phraseology as well. It was compiled by prof. A.V. Koonin. In 1979 an English-Russian dictionary of synonyms was published by Y.D. Apresyan, A.U. Rosenman and some other authors. Any teacher of English or interpreter should be able to use different types of dictionaries in his work.
